# 1 MAIN FEATURES

ITEM	CONTENTS
Display Format	128 x 64 Dots
Overall Dimensions	45.24 x 29.14 x 2.00 mm
Colour	Monochrome Yellow
Active Area	35.056 x 17.52 mm
Viewing Area	37.056 x 19.52 mm
Display Mode	Passive Matrix (1.54")
Driving Method	1/64 duty
Driver IC	SSD1305
Operating temperature	-30 ~ +70
Storage temperature	-40 ~ +80

Product No.	DD-12864YO-3A	REV. D

**Notes:**

- Color: Yellow
- Driver IC: SSD1305
- FPC Number: UT-0205-P05
- Interface:
- 8-bit 08XXX 80XXX Parallel, 4-wire SPI, I2C
- General Tolerance: ±0.30
- The total thickness (2-10 Max) is without polarizer protective film & remove tape. The actual assembled total thickness with above materials should be 2.35 Max.

### 3 ELECTRICAL SPECIFICATION

#### 3.1 ABSOLUTE MAXIMUM RATINGS

VSS = 0 V, Ta = 25 °C

Item	Symbol	Min	Max	Unit	Note
Supply Voltage for logic	V <sub>DD</sub>	-0.3	4.0	V	Note 1, 2
Supply voltage for Display	V <sub>CC</sub>	0	15	V	
Operating Temperature	Top	-30	85	°C	
Storage Temperature	Tst	-40	90	°C	
Life Time (150 cd/m <sup>2</sup> )		10,000		Hour	
Life Time (100 cd/m <sup>2</sup> )		40,000		Hour	
Static Electricity	Be sure that you are grounded when handling displays.				

Note 1: All the above voltages are on the basis of “GND=0V”.

Note 2: When this module is used beyond the above absolute maximum ratings, permanent damage to the module may occur. Also for normal operations it’s desirable to use this module under the conditions according to Section 3.2 “Electrical Characteristics”. If this module is used beyond these conditions the module may malfunction and the reliability could deteriorate.

Note 3: V<sub>CC</sub> = 12.5V, T<sub>a</sub> = 25°C, 50% Checkerboard.

Software configuration follows Section 5.4 Initialization.

End of lifetime is specified as 50% of initial brightness reached. The average operating lifetime at room temperature is estimated by the accelerated operation at high temperature conditions.

Product No.	DD-12864YO-3A	REV. D

### 3.2 ELECTRICAL CHARACTERISTICS

Characteristics	Symbol	Conditions	Min	Typ	Max	Unit
Supply Voltage	V <sub>DD</sub>		2.4	2.8	3.5	V
Supply Voltage for Display	V <sub>CC</sub>	Note 3	12	12.5	13.0	V
High Level Input	V <sub>IH</sub>	I <sub>OUT</sub> =0.1mA, 3.3MHz	0.8xV <sub>DD</sub>	-	V <sub>DD</sub>	V
Low Level Input	V <sub>IL</sub>		0	-	0.2 x V <sub>DD</sub>	V
High Level Output	V <sub>OH</sub>		0.9 x V <sub>DD</sub>	-	V <sub>DD</sub>	V
Low Level Output	V <sub>OL</sub>		0	-	0.1 x V <sub>DD</sub>	V
Operating current for V <sub>DD</sub>	I <sub>DD</sub>	Note 4	-	180	300	μA
		Note 5	-	180	300	
Operating current for V <sub>CC</sub>	I <sub>CC</sub>	Note 4	-	20	25	mA
		Note 5	-	30	38	
Sleep mode current for V <sub>DD</sub>	I <sub>DD SLEEP</sub>		-	1	5	μA
Sleep mode current for V <sub>CC</sub>	I <sub>CC SLEEP</sub>		-	2	10	μA

Note 3 Brightness (L<sub>br</sub>) and Supply Voltage for Display (V<sub>CC</sub>) are subject to the change of the panel characteristics and the customer's request

Note 4 V<sub>DD</sub> = 2.8V, V<sub>CC</sub> = 12.5V, 50% display area turned on.

Note 5 V<sub>DD</sub> = 2.8V, V<sub>CC</sub> = 12.5V, 100% display area turned on.

Product No.	DD-12864YO-3A	REV. D

### 3.3 INTERFACE PIN ASSIGNMENT

No.	Symbol	Function															
1	N.C.(GND)	<b>Reserved Pin (Supporting Pin)</b> The supporting pins can reduce the influences from stresses on the function pins. These pins must be connected to external ground.															
2	VLSS	<b>Ground of Analog Circuit</b> This is an analog ground pin. It should be connected to VSS externally															
3	VSS	<b>Ground of OEL System</b> This is a ground pin. It also acts as a reference for the logic pins, the OEL driving voltages, and the analog circuits. It must be connected to external ground.															
4	N.C.	<b>No Connection</b>															
5	VDD	<b>Power Supply for Logic Circuit</b> This is a voltage supply pin. It must be connected to external source.															
6	BS1	<b>Communicating Protocol Select</b> These pins are MCU interface selection input. See the following table: <table border="1" data-bbox="539 846 1078 936"> <thead> <tr> <th></th> <th>68XX-parallel</th> <th>80XX-parallel</th> <th>Serial</th> <th>I2C</th> </tr> </thead> <tbody> <tr> <td>BS1</td> <td>0</td> <td>1</td> <td>0</td> <td>1</td> </tr> <tr> <td>BS2</td> <td>1</td> <td>1</td> <td>0</td> <td>0</td> </tr> </tbody> </table>		68XX-parallel	80XX-parallel	Serial	I2C	BS1	0	1	0	1	BS2	1	1	0	0
	68XX-parallel		80XX-parallel	Serial	I2C												
BS1	0	1	0	1													
BS2	1	1	0	0													
7	BS2																
8	CS#	<b>Chip Select</b> This pin is the chip select input. The chip is enabled for MCU communication only when CS# is pulled low.															
9	RES#	<b>Power Reset for Controller and Driver</b> This pin is reset signal input. When the pin is low, initialization of the chip is executed.															
10	D/C#	<b>Data/Command Control</b> This pin is Data/Command control pin. When the pin is pulled high, the input at D7~D0 is treated as display data. When the pin is pulled low, the input at D7~D0 will be transferred to the command register. For detail relationship to MCU interface signals, please refer to the Timing Characteristics Diagrams. When the pin is pulled high and serial interface mode is selected, the data at SDIN is treated as data. When it is pulled low, the data at SDIN will be transferred to the command register. In I2C mode, this pin acts as SA0 for slave address selection.															
11	R/W#	<b>Read/Write Select or Write</b> This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as Read/Write (R/W#) selection input. Pull this pin to "High" for read mode and pull it "Low" for write mode. When 80XX interface mode is selected, this pin will be the Write (WR#) input. Data write operation is initiated when this pin is pulled low and the CS# is pulled low.															
12	E/RD#	<b>Read/Write Enable or Read</b> This pin is MCU interface input. When interfacing to a 68XX-series microprocessor, this pin will be used as the Enable (E) signal. Read/write operation is initiated when this pin is pulled high and the CS# is pulled low. When connecting to an 80XX-microprocessor, this pin receives the Read (RD#) signal. Data read operation is initiated when this pin is pulled low and CS# is pulled low.															
13~20	D0~D7	<b>Host Data Input/Output Bus</b> These pins are 8-bit bi-directional data bus to be connected to the microprocessor's data bus. When serial mode is selected, D1 will be the serial data input SDIN and D0 will be the serial clock input SCLK. When I2C mode is															

Product No.	DD-12864YO-3A	REV. D

Page	9 / 27
------	--------

		selected, D2 & D1 should be tied together and serve as SDAout &SDAin in application and D0 is the serial clock input SCL.
21	IREF	<b>Current Reference for Brightness Adjustment</b> This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current lower than 10uA

22	VCOMH	<b>Voltage Output High Level for COM signal</b> This pin is the input pin for the voltage output high level for COM signals. A capacitor should be connected between this pin and VSS.
23	VCC	<b>Power Supply for OEL Panel</b> This is the most positive voltage supply pin of the chip. It can be supplied externally or generated internally by using internal DC/DC voltage converter.
24	N.C.(GND)	<b>Reserved Pin (Supporting Pin)</b> The supporting pins can reduce the influences from stresses on the function pins. These pins must be connected to external ground.

## 4 OPTICAL SPECIFICATION

### 4.1 OPTICAL CHARACTERISTICS

Characteristics	Symbol	Condition	Min	Typ	Max	Unit
Brightness(White)	L <sub>br</sub>	With Polarizer (Note 3)	120	150	-	cd/m <sup>2</sup>
C.I.E.(White)	(X)	C.I.E 1931	0.44	0.48	0.52	-
	(Y)		0.46	0.50	0.54	
Dark Room Contrast	CR		-	>2000:1	-	-
Viewing Angle			>160	-	-	degree

Optical measurement taken at V<sub>DD</sub> = 2.8V, V<sub>CC</sub> = 12.5V.  
Software configuration follows Section 5.4 Initialization

Product No.	DD-12864YO-3A	REV. D

Page	16 / 27
------	---------

## 5 FUNCTIONAL SPECIFICATION

### 5.1 COMMANDS

Please refer to the Technical Manual for the SSD1305

### 5.2 POWER UP/DOWN SEQUENCE

To protect panel and extend the panel lifetime, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off. It gives the panel enough time to complete the action of charge and discharge before/after the operation.

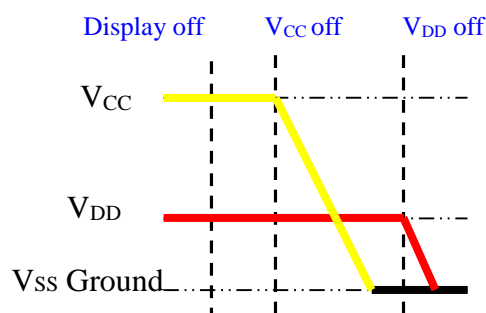

#### 5.2.1 POWER UP SEQUENCE

1. Power up  $V_{DD}$
2. Send Display off command
3. Initialization
4. Clear Screen
5. Power up  $V_{CC}$
6. Delay 100ms  
(when  $V_{DD}$  is stable)
7. Send Display on command

#### 5.2.2 POWER DOWN SEQUENCE

1. Send Display off command
2. Power down  $V_{CC}$
3. Delay 100ms  
(When  $V_{PP}$  reach 0 and panel is completely discharges)
4. Power down  $V_{DD}$

### 5.3 RESET CIRCUIT

When RES# input is low, the chip is initialized with the following status:

1. Display is OFF
2. 132x64 Display mode
3. Normal segment and display data column and row address mapping (SEG0 mapped to column address 00H and COM0 mapped to row address 00H)
4. Shift register data clear in serial interface
5. Display start line is set at display RAM address 0
6. Column address counter is set at 0
7. Normal scan direction of the COM outputs
8. Contrast control register is set at 80H
9. Normal display mode (Equivalent to A4h command)

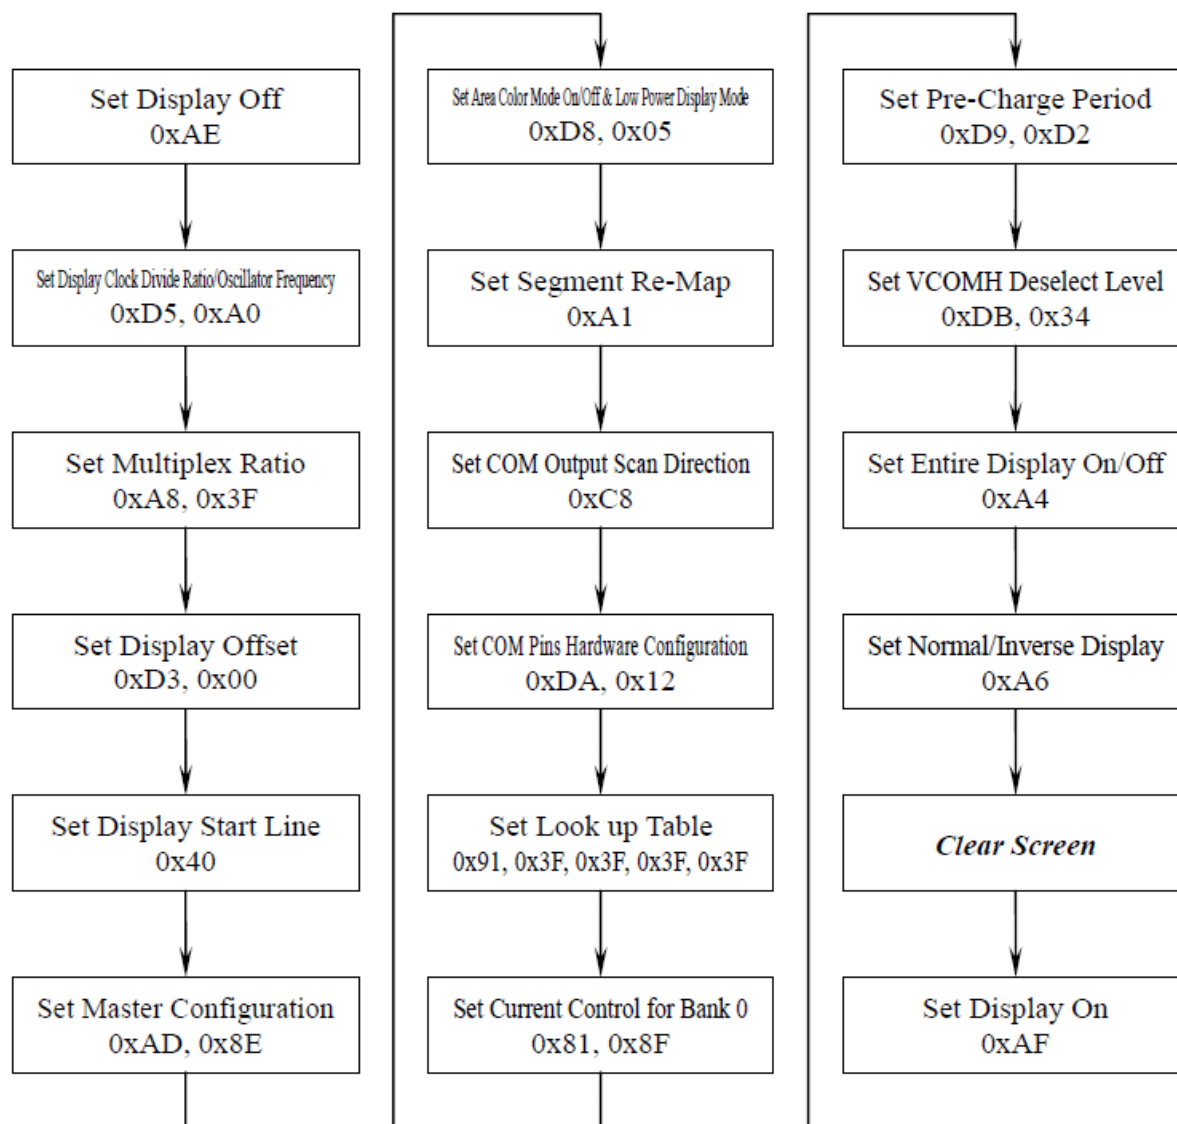

Product No.	DD-12864YO-3A	REV. D

Page	17 / 27
------	---------

## 5.4 ACTUAL APPLICATION EXAMPLE

Command usage and explanation of an actual example

<Initialisation Setting>

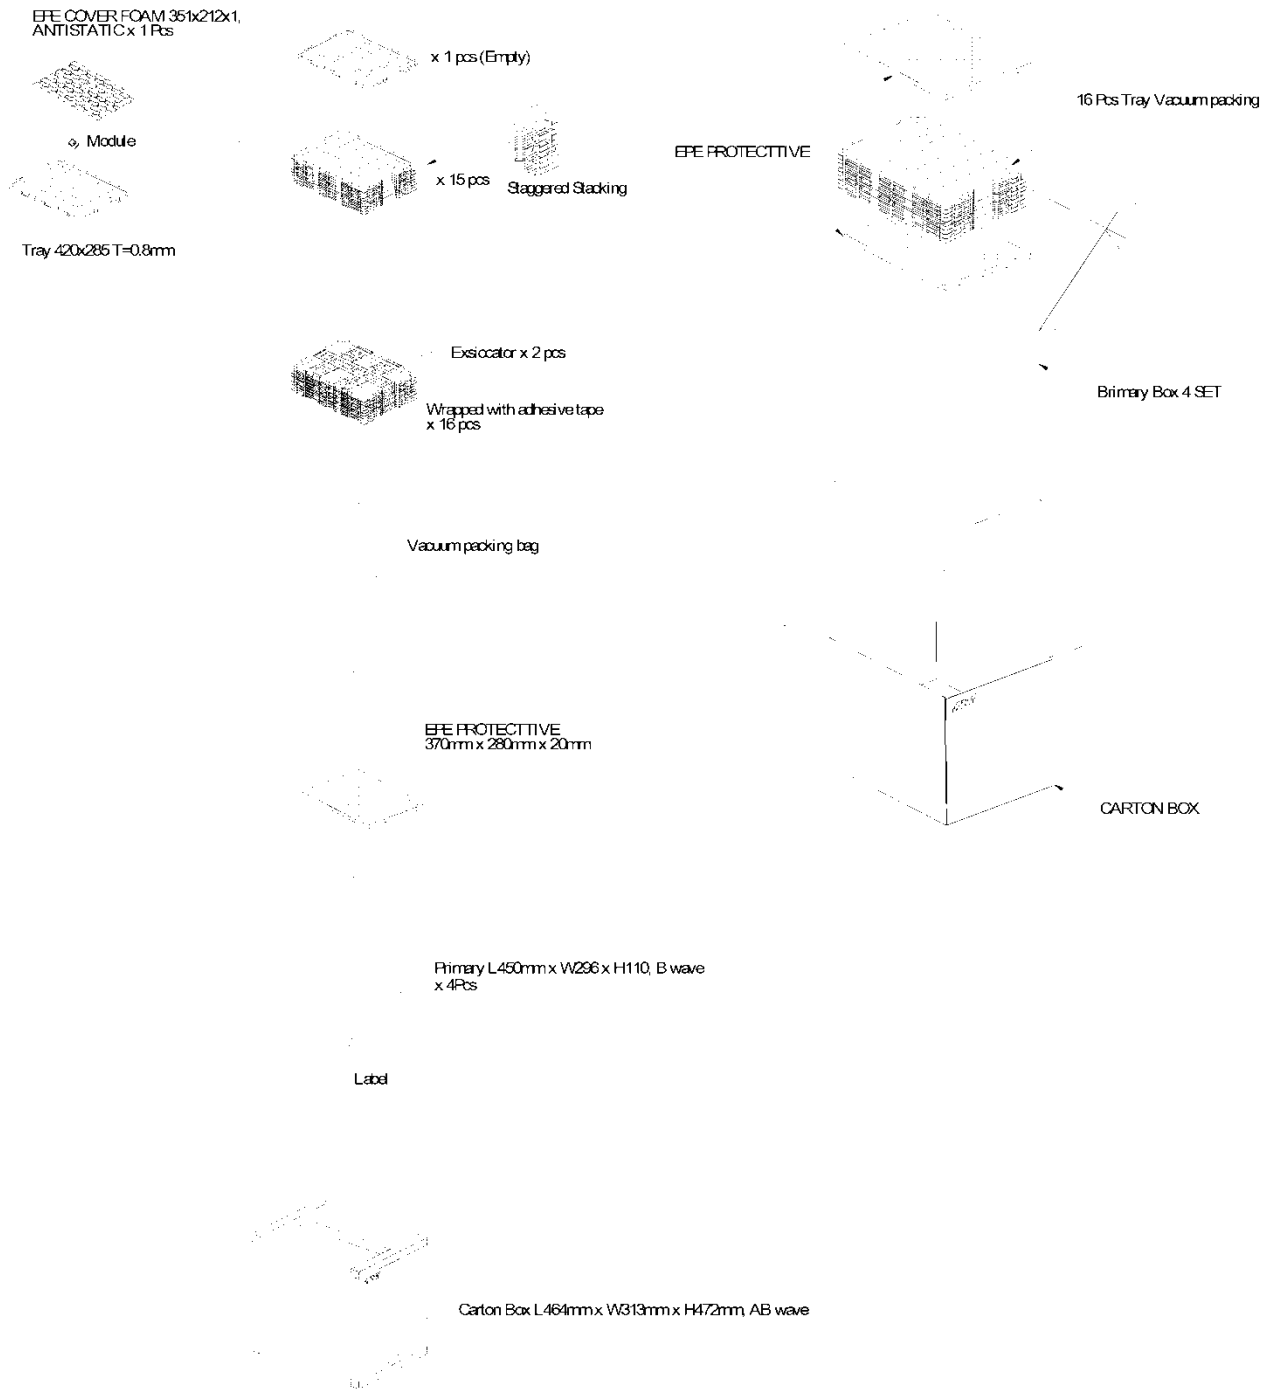

If the noise is accidentally occurred at the displaying window during the operation, please reset the display in order to recover the display function.

Product No.	DD-12864YO-3A	REV. D

Page	18 / 27
------	---------

54 Pieces per tray  
 15 trays per box ( 810 pieces )  
 4 boxes per carton (3240 pieces )

## 6 PACKAGING AND LABELLING SPECIFICATION

Product No.	DD-12864YO-3A	REV. D

Page	19 / 27
------	---------

## 7 QUALITY ASSURANCE SPECIFICATION

### 7.1 CONFORMITY

---

The performance, function and reliability of the shipped products conform to the Product Specification.

### 7.2 DELIVERY ASSURANCE

---

#### 7.2.1 DELIVERY INSPECTION STANDARDS

IPC-AA610, class 2 electronic assemblies standard

#### 7.2.2 Zone definition

#### 7.2.3 Visual inspection

Test and measurement to be conducted under following conditions:

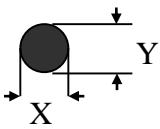

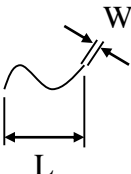

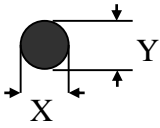

Temperature:	23±5°C
Humidity:	55±15%RH
Fluorescent lamp:	30 W
Distance between the Panel & Eyes of the Inspector:	≥30cm
Distance between the Panel & the lamp:	≥50cm

Product No.	DD-12864YO-3A	REV. D

------	---------

Class	Item	Criteria			
Minor	Contact Lead Twist	Not allowed			
Minor	Contact Lead Broken	Not allowed			
Minor	Contact Lead Bent	Not allowed if bent lead causes short circuit			
		Not allowed if bent lead extends horizontally more than 50% of its width			
Minor	Colour uniformity	Level of sample for approval set as limit sample			
Major		No unmelted solder paste should be present on PCB			
Critical		Cold solder joints, missing solder connections, or oxidation are not allowed			
Minor		No residue or solder balls on PCB are allowed			
Critical		Short circuits on components are not allowed			
Minor	Tray particles		Size	Quantity	
			On tray	$\varnothing < 0.2$	Any number
				$\varnothing > 0.25$	4
			On display	$\varnothing \geq 0.25$	2
$L = 3$	1

## **7.3 DEALING WITH CUSTOMER COMPLAINTS**

---

### **7.3.1 Non-conforming analysis**

Purchaser should supply Densitron with detailed data of non-conforming sample.  
 After accepting it, Densitron should complete the analysis in two weeks from receiving the sample.  
 If the analysis cannot be completed on time, Densitron must inform the purchaser.

### **7.3.2 Handling of non-conforming displays**

If any non-conforming displays are found during customer acceptance inspection which Densitron is clearly responsible for, return them to Densitron.  
 Both Densitron and customer should analyse the reason and discuss the handling of non-conforming displays when the reason is not clear.  
 Equally, both sides should discuss and come to agreement for issues pertaining to modification of Densitron quality assurance standard.

Product No.	DD-12864YO-3A	REV. D

## 8 RELIABILITY SPECIFICATION

### 8.1 RELIABILITY TESTS

Test Item	Test Condition	Evaluation and assessment
High Temperature Operation	85°C, 500 hours	No abnormalities in function and appearance
Low Temperature Operation	-30°C, 500 hours	No abnormalities in function and appearance
High Temperature Storage	90°C, 500 hours	No abnormalities in function and appearance
Low Temperature Storage	-40°C, 500 hours	No abnormalities in function and appearance
High Temperature & High Humidity Storage(Operation)	60°C, 90%RH, 240 hours	No abnormalities in function and appearance
Thermal Shock	-40°C 85°C, 100 cycles 30 mins dwell	No abnormalities in function and appearance

- The samples used for above tests do not include polarizer.
- No moisture condensation is observed during tests.

#### 8.1.1 FAILURE CHECK STANDARD

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5 °C; 55±15% RH

### 8.2 LIFE TIME

Item	Description
1	Function, performance, appearance, etc. shall be free from remarkable deterioration more than 10,000 hours under 150 cd/m <sup>2</sup> brightness and 40,000 hours under 100 cd/m <sup>2</sup> brightness at 50% Checkerboard, humidity (50% RH), and in area not exposed to direct sunlight.
2	End of lifetime is specified as 50% of initial brightness.

Product No.	DD-12864YO-3A	REV. D

## 9 HANDLING PRECAUTIONS

### *Safety*

If the panel breaks, be careful not to get the organic substance in your mouth or in your eyes.

If the organic substance touches your skin or clothes, wash it off immediately using soap and plenty of water.

### *Mounting and Design*

Place a transparent plate (e.g. acrylic, polycarbonate or glass) on the display surface to protect the display from external pressure. Leave a small gap between the transparent plate and the display surface.

Design the system so that no input signal is given unless the power supply voltage is applied.

### *Caution during OLED cleaning*

Lightly wipe the display surface with a soft cloth soaked with Isopropyl alcohol, Ethyl alcohol or Trichlorotrifluoroethane.

Do not wipe the display surface with dry or hard materials that will damage the polariser surface.

Do not use aromatic solvents (toluene and xylene), or ketonic solvents (ketone and acetone).

### *Caution against static charge*

As the display uses C-MOS LSI drivers, connect any unused input terminal to  $V_{DD}$  or  $V_{SS}$ . Do not input any signals before power is turned on.

Also, ground your body, work/assembly table and assembly equipment to protect against static electricity.

### *Packaging*

Displays use OLED elements, and must be treated as such. Avoid strong shock and drop from a height.

To prevent displays from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.

### *Caution during operation*

It is indispensable to drive the display within the specified voltage limit since excessive voltage shortens its life.

### *Other Precautions*

When a display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur.

Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored.

Also, there will be no problem in the reliability of the module.

### *Storage*

Store the display in a dark place where the temperature is  $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$  and the humidity below 50%RH.

Store the display in a clean environment, free from dust, organic solvents and corrosive gases.

Do not crash, shake or jolt the display (including accessories).

## 10 SUPPORTED ACCESSORIES

### 10.1 DUO KIT

---

Densitron has developed an easy to use yet powerful development and demonstration tool for driving its range of Passive Matrix OLED displays from the USB port of a PC.

DUO (Densitron USB OLED) kit is hot pluggable and does not require extra cables or power supply to run, allowing users to be up and running in minutes.

The kit consists of an OLED display with transition Board, USB controller card, mini USB cable and a CD with software application and drivers.

**Part number: PDK-N-12864YO-3A**

### 10.2 TRANSITION BOARD CARD

---

A Transition board card is like a daughterboard which is meant to be a circuit board for connections between the baseboards (DUO).

It has connector pins for interfacing between the display and the baseboards.

It also includes the OLED display.

**Part number: PDT-N-12864YO-3A**

### 10.3 CONNECTOR BOARD CARD

---

A Connector board is a daughterboard which allows a connection between customer's microprocessor or microcontroller (customer's system) to the display.

**Part number: EVK-CONNECT-015**

### 10.4 CONNECTOR

---

Type: ZIF connector
